ShinyX will be the 2nd standalone window manager written in C++11, following MinGW-w64 GUI, the leading window manager of C++. It will use free GTK+ 3.18, and will use the new features of C++11 such as lambda and auto. It will include a multi-monitor window manager, screen sharing, and complete shell customization. It will be completely portable, and will be able to work on any platform where GTK+ is available. R_BASELINE.c is a console application for time-based evaluation of a series of documents and a group of tasks. It evaluates each document, resulting in a score from zero to one, and an order of documents for each task. It also tracks the time spent on each document, resulting in a list of the documents' durations. For each task, it reports the average document duration, the number of documents used, and the average time spent on each document. This report can be viewed as a series of tables, with columns for tasks, documents, and durations, and rows for each task, documents, and average document and task durations. R_BASELINE.c is designed for use with the R_BASELINE workbench. libphycite.a is a library of low-level routines to interface a hardware-accelerated 2D scanner to iphone and ipad app sshscan is a tool for parsing SSH/SSH2/SSH1 protocol user authentication messages.
