Don't be selling yourself short by calling it Adobe Photoshop. This thing is a beast of a program, although it can be slow sometimes. Even when exporting a modest-sized gallery with 50-100 images, be prepared for a stint at Photoshop. If this is your first experience with it, go to the Preferences menu and set your preferences. Such as crop tool, PS integration, and cropping. Also always make sure your image is in JPG and not TIFF. If you are worried about data loss, don't export as TIFF – PNG is a much better format for this. If you are making a very big time-intensive project that will hang your machine, maybe consider trying Lightroom in Developer Mode. With that you will have unlimited undo's etc. If for some reason you find yourself deleting your image and want to go back, just use Undo – you don't lose anything, and it is super easy. With Photoshop I always check my Data Usage; I do not want to have more than 1.5 to 2.0 GB of it left after editing. If your output media is going to be a camera, you will find yourself exporting different resolutions and formats if you use Photoshop. The most popular raw files (DNG) seem to be the least convenient in this regard. Other features that improved in version 5 are the usual speed and quality offered by Adobe. However, I'm a bit disheartened by the lack of user-friendliness in the new version. I started out with the basics — converting, editing, and stacking images — but I found that as I started to learn Photoshop's user interface I couldn't understand anything and I got stuck. I was too afraid to change the canvas view, and that's absolutely necessary for editing large images. The dialog boxes themselves can be confusing; I couldn't figure out how to navigate them and find the function I wanted.

Because there are so many different features to try out, I suggest you use the sample images to learn what most of these features are. Below are some real photos I created using some of these new features. You'll notice that a lot of the shots have been taken right out of the camera with settings like aperture, ISO, and shutter speed and I've used the various blending options to add a "vintage" feel with a lot of color in them. Here are a few examples of how to use the different blending options. The first is a simple portrait image where I've used a selection to give highlights and shadow, added an opacity of 80%, and gave it a nice vintage look using the overlay, gradient map, and pattern blending options. The second

example is a shot of a marble that had the saturation reduced slightly, the back lit turned off, and it's been made to look more blue-ish by having it put a gradient map on it. The next set uses a light cardboard texture that I made using the filter, pattern, and softness options. I also created a small vignette using soft light, added a slight opacity, and lightened the entire thing for a more abstract, dimensional look at the layer. While many digital artists tend to have their own, individual, customized Photoshop plugin, some will utilize the work of others. For example, many effects and textures you see on the internet are created by digital artists who are not desktop publishing or Adobe Photoshop experts. Generally speaking, Photoshop has more features to work with than is needed for making a simple image. Photoshop has a features a checklist for beginners. It gives you tips and practice exercises. e3d0a04c9c
