Cracking Photoshop is not as straightforward as installing it. It requires a few steps to bypass the security measures that are in place. First, you must obtain a cracked version of the software from a trusted source. Activating a software is the process of linking the serial number that you generated to the full version of the software. This is a simple process that can be done using a valid serial number. After you have turned on Adobe Photoshop, it will ask you to activate it. When this happens, you need to enter the serial number that you generated. You should now have a fully functional version of the software. Just remember, cracking software is illegal and punishable by law, so use it at your own risk.

In addition to the new features, the updated version includes a more powerful "smart" understanding system and the ability to create more advanced actions. It is compatible with the new Mac OS X versions of Apple's iLife software. Besides the update to the Mac platform, this release is part of a new version of Photoshop CS5.5—or, as the gurus have it, Photoshop.99999. The major new feature is the iCloud integration, which is like Flickr photo-sharing with a free web-based image-routing service. Thumbnails, tags, and comments can be viewed for images you store on the service. With recent upgrades to Photoshop, it is possible to work with all of the software's tools—like curves, brushes, layer masks, paint pans, and much more—to achieve even more complex transitions and effects than ever before. The tools are compared to those in popular video-editing software programs like Adobe Premiere Pro and Apple Final Cut Express. In the latest version, you'll find that the tool modes have been streamlined, and you can adjust many settings in one place rather than juggling them on the fly. If you need to operate in secrecy, you need different software. Even back around CS2 (or maybe it was Photoshop 7), Photoshop recognized if you were scanning money, showed you a warning box, and refused to open it. Since Adobe knows who you are, it's trivial for Adobe to send the Secret Service your personal information and physical location in real-time if they choose to. Adobe knows what you're doing because Photoshop is talking to Adobe over the Internet in the background; that's how activation works. Run many days offline, and the program will stop running until you go online again for it to validate and swap data.
